ABSTRACT

This publication provides historical data on enrollment, weekly student contact hours, and average daily attendance for the district and for each college in the district. Detailed enrollment data (by student category and also by ethnic group) are provided for the 1972-73 and 1973-74 academic years. Ten-year trends are available for less detailed enrollment information and also for average daily attendance. Five-year trends are presented for weekly student contact years and for weekly student contact hours per student. Total district enrollment has grown 59.3% since fall 1964. In regard to weekly student contact hours, the average weekly load per day student has decreased during the last five years from 15.80 hours in fall 1969 to 13.48 hours in fall 1973. The average load per evening student has increased during the same period from 6.76 to 8.39 hours. Total district average daily attendance has increased 65.2% during the last 10 years to a total of 64,982 in fall 1973. Average daily attendance generated by day students comprised 74.8% of this total, while ADA generated by other-than-adult students comprised 84.3%. (Author/DB)

ABSTRACT

This publication provides historical data on enrollment, weekly student contact hours, and average daily attendance for the District and for each college in the District. Detailed enrollment data (by student category and also by ethnic group) are provided for the 1972-73 and 1973-74 academic years. Ten-year trends are available for less detailed enrollment information and also for average daily attendance. Five-year trends are presented for weekly student contact hours and for weekly student contact hours per student.

All-time District high-points were reached during the 1973-74 academic year in both Fall enrollment (108,395) and Spring enrollment (106,022). These figures represent respective increases of 5.5% and 5.6% over comparable semesters of the 1972-73 academic year--increases that compare favorably with those experienced by other colleges and universities in Los Angeles County during the last two years. Total District enrollment has grown 59.3% since Fall 1964.

In regard to weekly student contact hours, the average weekly load per day student has decreased during the last five years from 15.80 hours in Fall 1969 to 13.48 hours in Fall 1973. The average load per evening student has increased during the same period from 6.76 to 8.39 hours.

Total District average daily attendance has increased 65.2% during the last ten years to a total of 64,982 in Fall 1973. Average daily attendance generated by day students comprised 74.8% of this total, while ADA generated by other-than-adult students comprised 84.3%.

GLOSSARY

Average daily attendance (ADA) is a measure of attendance that is calculated from weekly student contact hours.* Attendance ADA is calculated on a semester basis and is thus comparable to other measurements reported by semester. Apportionment ADA is calculated on an other-than-semester basis and is the figure used to determine State apportionment to the District. ADA is calculated differently for defined adult* than for other-than-adult* students.

Census day is a fixed date during a semester (usually Monday of the fourth week of classes) at which time counts of weekly student contact hours* and enrollment* are taken for State reporting purposes.

Continuing students at a college are students who were enrolled in the same college during the immediately preceding semester.

Day students are students who are taking one or more classes convening prior to 4:30 p.m.; the category thus includes students who are taking both day and evening classes.

Defined adult (DA) is a student who is 21 years of age or older and who is enrolled for less than 10 weekly student contact hours.*

Enrollment is a "head-count" of the total number of students in a college or District; enrollment, unlike ADA, does not reflect the number of weekly student contact hours* for which students are enrolled.

Ethnic status refers to racial affiliation as reported by students on a voluntary basis.

Evening students are students who are enrolled exclusively in classes convening at 4:30 P.M. or later.

First-time students at a college are students who were not enrolled in the college during the immediately preceding semester; the term includes both freshmen and transfers and also students returning to the college after an absence.

Freshmen are students who at the time of registration, have completed less than 30 semester units of college credit.

Full-time students are enrolled for 12 or more units during a semester.

Other-than-adult (OTA) students are under 21 years of age or enrolled for 10 or more weekly student contact hours.*

* Indicates Glossary entry

GLOSSARY

(Continued)

Part-time students carry less than 12 units.

Sophmores are students who, at the time of registration, have completed 30 or more semester units of college credit.

Weekly student contact hours (WSCH) are derived by multiplying the number of students enrolled in a class by the number of hours per week for which the class meets. A class with 10 students which meets three times a week would thus generate 3 x 10 or 30 WSCH.

DISTRICT PROFILE

Two-Year Enrollment Comparisons

Enrollment data for the District and for each of its eight colleges for the 1972-73 and 1973-74 academic years are presented on p. 6. All-time District high-points were reached during 1973-74 in both Fall enrollment (108,395) and Spring enrollment (106,022). These figures represent respective increases of 5.5% and 5.6% over comparable semesters of the 1972-73 academic year. Fall LACCD enrollment represented approximately 11% of the total community college enrollment in the State of California.

Los Angeles City College continues to have the largest total enrollment in the District with 19,185 students (Fall 1973). Not surprisingly, the largest percentage growth (15.1% from Fall 1972 to Fall 1973) was posted by the District's newest institution, West Los Angeles, established in 1968.

District enrollment in various student categories during the last two academic years is shown on p. 7. (Definitions of the various categories may be found in the Glossary on pp. ix-x.) The data on p. 7 reveal that:

- Evening enrollment is increasing at a greater rate than is day enrollment, representing 42.3% of total District enrollment in Fall 1973.
- Female enrollment (44.5% in Fall 1973) is increasing at a greater rate than is male enrollment.
- Enrollment of first-time students (35.7% in Fall 1973) is increasing at a greater rate than is enrollment of continuing students. (The "pool" of potential first-time students is, of course, much larger than the pool of potential continuing students.)
- While enrollment of students under age 21 declined 2.3% between Fall 1972 and Fall 1973, enrollment of students aged 21 and over increased 9.9% in the same period. The latter group represented 66.3% of total LACCD enrollment in Fall 1973.

These trends indicate that the Los Angeles Community College District is currently experiencing the nationwide trends away from enrollment of "traditional" students (male day students under 21) and toward enrollment of "non-traditional" students such as females, evening students, and students 21 and over.

District Ethnic Enrollment Data

District ethnic enrollment data for the 1972-73 and 1973-74 academic years are presented on p. 8. When discussing these data it is necessary to keep in mind several facts. For one thing, ethnic status is reported by students on a voluntary basis each semester; consequently, differences between semesters may reflect differential willingness to report accurate ethnic status rather than true ethnic enrollment changes. In addition, ethnic information is collected on significantly less than 100% of students in any semester; rates were 87.8% in Fall 1972, 91.2% in Fall 1973, and 69.9% in Spring 1974. Consequently, percentages in ethnic tables represent percentages of students reporting ethnic data rather than percentages of total students. Finally, two-year ethnic data are available only for the Fall semesters, and "trends" must be considered accordingly.

With the foregoing caveats in mind, it appears that:

- "Other White" students represent the largest single ethnic group within the District (57.1% in Fall 1973) but are declining relative to other groups.
- Black/Negro students comprise the second-largest ethnic group within the District (20.6% in Fall 1973) and are increasing in numbers more rapidly than any other group.
- Spanish-Surnamed students (including the categories Mexican-American and Puerto Rican) are the third largest ethnic group in the District and are increasing at a rate exceeded only by Black/Negro students.

Comparative Enrollment At Other Institutions

District enrollment for the last two academic years is compared with that of various two- and four-year colleges in Los Angeles County on p. 9. LACCD enrollment increased 5.5% from Fall 1972 to Fall 1973, and 5.6% from Spring 1973 to Spring 1974. The other community colleges in the County grew 5.7% and 4.2% in the same periods, while the various four-year colleges listed increased 2.9% and 0.7%. It would appear that the four-year colleges in Los Angeles County are experiencing a slowdown in enrollment growth relative to the County's two-year institutions.

Ten-Year Enrollment Comparisons

Ten-year District enrollment data are presented in tabular form on p. 10 and graphically on pp. 11 and 12. Examination of these data reveals the following long-terms trends:

- Total District Fall enrollment grew 59.3% during the last 10 years, for an average yearly growth of 5.9%. Total District Spring enrollment grew 57.4% over the same period.
- Fall enrollment has exceeded Spring enrollment in all years but 1968-69. The preponderance of Fall over Spring enrollment, however, has been confined largely to day rather than evening enrollment.
- Fall enrollment is a relatively good predictor of Spring enrollment. Day enrollment may be expected to drop about 4.3% from Fall to Spring, judging from the last five years, while evening enrollment may be expected to be about the same in both semesters.
- Fall day enrollment increased 92.6% during the last 10 years and Fall evening enrollment 29.0%. Evening enrollment, however, has showed larger percentage increases than day enrollment in the last two years and thus may be narrowing the gap.

Weekly Student Contact Hours (WSCH)

Weekly student contact hours (WSCH) may be thought of as classroom hours. A class which meets three times a week and contains 10 students produces 3 x 10 or 30 WSCH. WSCH, like enrollment, is computed as of census day, generally Monday of the fourth week of classes during each semester.

District WSCH per student data for the last five academic years are presented tabularly on pp. 13 and 14 and graphically on p. 15. It is clear that, in day classes, WSCH per student has declined for the last five years. In evening classes, on the other hand, WSCH per student has increased during the same period. These trends are evident in both Fall and Spring and indicate that, while day students are taking lighter class loads, evening students are taking heavier loads. During Fall 1973 the average day student carried a class load of 13.48 hours and the average evening student 8.39 hours. Five years ago the comparable class loads were 15.80 and 6.76. It is interesting to note that students generally took heavier class loads in Spring than in Fall during the last five years.

Average Daily Attendance (ADA)

Average daily attendance, like student class load, is calculated from weekly student contact hours. An important distinction in regard to ADA is made between "defined adults" (DA) and "other-than-adults" (OTA). The former category consists of students aged 21 or over who are registered for under 10 class hours during census week; the latter category consists of all other students. The importance of the DA-OTA distinction derives from the fact that the two types of students generate different amounts of state apportionment income for the District. The formulas used to compute ADA for the two categories differ only in the mathematical constant by which WSCH are multiplied.

ADA is affected by many of the same variables that influence enrollment, e.g., the presence or absence of student fees and the draft. An additional problem affecting ADA, however, is that the method of computation used to derive it has occasionally changed. Year-to-year trends must be evaluated with the foregoing factors in mind.

ADA data for the last ten academic years are presented on pp. 16-19. The data on pp. 16 and 17 allow day vs. evening comparisons and the data on pp. 18 and 19 DA vs. OTA comparisons.*

One can see from the day - evening comparisons that day ADA (day DA and day OTA combined) has traditionally comprised a larger percentage of total ADA (74.8% in Fall 1973) than has evening ADA (25.2%). However, an unusual pattern emerges when analyzing rates of increase for day and evening ADA. In Fall comparisons day ADA has experienced a greater increase than evening ADA since 1964 (73.5% compared to 44.9%). In Spring comparisons, however, it is evening ADA that has experienced the greater percentage increase (96.2% compared to day's 65.1%). Day ADA has dropped an average of 2.5% from Fall to Spring during the last 10 years, while evening ADA has increased an average of 5.0%.

In regard to OTA - DA comparisons, ADA generated by OTA students (day and evening combined) is preponderant over that generated by DA students both in percentage of total ADA (84.3% in Fall 1973) and in rate of increase (76.3% growth from Fall 1964 to Fall 1973). ADA generated by OTA students has decreased an average of 1.9% from Fall to Spring during the last 10 years, while ADA generated by DA students has increased an average of 5.6%.

---

* These data represent attendance rather than apportionment ADA. The latter figure would require two adjustments: (a) the addition of students who live within LACCD boundaries but attend a community college in another district, and (b) the subtraction of students who live within the boundaries of another district but attend an LACCD college.

EAST LOS ANGELES COLLEGE

Two-Year Enrollment Comparisons

Enrollment at East Los Angeles College in various student categories during the last two academic years is shown on p. 22. East exhibits the District-wide trend of the last two academic years toward increased enrollment of females (41.9% of total Fall 1973 enrollment), first-time students (34.7%), and students aged 21 and over (67.7%). In addition, East shows a trend for increased enrollment of freshmen (75.1% in Fall 1973) relative to sophomores. (Freshman enrollment increased 13.9% and 15.4% in Fall and Spring comparisons, respectively, while sophomore enrollment increased 2.5% in the Fall but declined 25.6% in the Spring.) East supports the District trend toward increased evening enrollment only in the Fall Semester.

Ethnic Enrollment Data

Ethnic enrollment data for East Los Angeles College are presented on p. 23. Clearly the most salient ethnic characteristic of East is its substantial enrollment of Spanish-Surnamed students; this group represented 52.1% of total enrollment in Fall 1973, the highest percentage at any college in the District. Conversely, East's "Other White" percentage of 31.8% in Fall 1973 was the lowest of any District college except Harbor. Black/Negro students experienced the largest percentage increase of any ethnic group at East.

Ten-Year Enrollment Comparisons

Ten-year enrollment data for East Los Angeles College are presented on pp. 24 and 25. Day enrollment has undergone fairly consistent growth since 1964, with respective Fall and Spring increases of 75.7% and 88.9% during that period. Evening enrollment shows a particularly erratic pattern, although the degree to which these fluctuations are indeed indicative of true enrollment changes rather than irregularities in record-keeping is unknown.

Weekly Student Contact Hours (WSCH)

WSCH and WSCH per student data for the last five academic years are presented on pp. 26 and 27. As is the case throughout the District, WSCH per day student has declined since 1969 while WSCH per evening student has increased. This trend is evident in both Fall and Spring and indicates that, while day students are taking progressively lighter class loads, evening students are taking heavier loads.

Average Daily Attendance (ADA)

Day - evening ADA comparisons are presented on p. 28 and OTA - DA comparisons on p. 29. The data on p. 28 show that East is compatible with the overall District in the preponderance of day over evening in terms of percentage of total ADA. In terms of rate of increase, however, evening ADA has increased more sharply than day in both Fall and Spring semesters. (In the District as a whole, evening ADA experienced the greater percentage increase in Spring but not in Fall.)

East's OTA - DA comparisons are compatible with District-wide patterns, with OTA dominant both in percentage of total ADA and in percentage increase since 1964.

LOS ANGELES CITY COLLEGE

Two-Year Enrollment Comparisons

Enrollment at Los Angeles City College in various student categories during the 1972-73 and 1973-74 academic years is shown on p. 32. City exhibits the District-wide trend of increased enrollment of students aged 21 and over; this group represented 71.2% of City's total enrollment in Fall 1973. However, City supports the District trends toward increased enrollment of evening relative to day students only in the Fall, and the trend toward increased enrollment of first-time relative to continuing students only in the Spring. Most interesting is the greater increase in enrollment experienced by male students relative to female students; the District-wide trend is toward increased enrollment of the latter group.

Ethnic Enrollment Data

Ethnic enrollment data for Los Angeles City College are presented on p. 33. "Other White" and Black/Negro students comprised the two largest ethnic groups in Fall 1973 (37.0% and 32.3%, respectively). City's Fall 1973 percentage of Oriental/Asian students (12.6%) was the highest of any college in the District.

Ten-Year Enrollment Comparisons

Ten-year enrollment data for Los Angeles City College are presented on pp. 34 and 35. The year-to-year trends in day enrollment are generally in consonance with District-wide trends. An unusual characteristic at City, however, was the sharp decline in evening enrollment evident from Fall 1969 through Spring 1972. District-wide evening enrollment during this period was fairly constant.

Weekly Student Contact Hours (WSCH)

WSCH and WSCH per student data for the academic years 1969-70 through 1973-74 are presented on pp. 36 and 37. City shows the District-wide trend toward decreased class loads for day students and increased class loads for evening students. The class loads at City were 13.34 hours for day students and 8.07 hours for evening students (Fall 1973). In Fall 1969 the comparable loads were 16.16 and 6.96 hours.

Average Daily Attendance

City's day - evening ADA comparisons are presented on p. 38 and the OTA - DA comparisons on p. 39. The data indicate that City supports the District-wide trends in both day - evening and OTA - DA ADA comparisons.

LOS ANGELES HARBOR COLLEGE

Two-Year Enrollment Comparisons

Harbor's enrollment in various student categories for the last two academic years is shown on p. 42. Harbor exhibits the District-wide pattern of increased enrollment among females, first-time students, and students aged 21 and over. These groups represented, respectively, 47.5%, 38.8% and 59.0% of Harbor's student body in Fall 1973. However, Harbor shows the general District trend toward increased evening enrollment only in the Fall semester. Harbor shows a clear trend in both Fall and Spring toward increased part-time relative to full-time enrollment; the District as a whole showed this trend only in the Spring.

Ethnic Enrollment Data

Ethnic enrollment data for Los Angeles Harbor College are shown on p. 43. Unfortunately, only Fall data are available. The largest ethnic groups are "Other White" students (62.6% in Fall 1973), Spanish-Surnamed students (13.6%), and Black/Negro students (12.1%). The lattermost group seems to be increasing most sharply, while "Other White" students appear to represent a decreasing percentage of total Harbor enrollment.

Ten-Year Enrollment Comparisons

Harbor's enrollment since 1964-65 is shown on pp. 44 and 45. Very consistent growth is evident in both Fall and Spring comparisons in both day and evening enrollment. In accordance with the District-wide pattern, day enrollment has increased more sharply since 1964 than has evening enrollment (112.7%

vs. 96.2% from Fall 1964 to Fall 1973).

Weekly Student Contact Hours (WSCH)

WSCH and WSCH per student data are found on pp. 46 and 47. Harbor exhibits the District-wide trend toward lighter class loads for day students in Fall 1973 (12.90 hours) relative to Fall 1969 (14.23 hours). However, the overall District trend toward increased evening class loads is not supported; evening students averaged 8.46 hours in Fall 1973 compared to an average of 9.61 hours in Fall 1969. Both day and evening students at Harbor thus appear to be taking lighter class loads than they did five years ago.

Average Daily Attendance (ADA)

Harbor's day - evening ADA comparisons are found on p. 48 and the OTA - DA comparisons on p. 49. Harbor's ADA trends are compatible with the District as a whole in both day - evening and OTA - DA comparisons. The percentages of total ADA generated by day and OTA students in Fall 1973 were, respectively, 77.8% and 85.9%.

LOS ANGELES PIERCE COLLEGE

Two-Year Enrollment Comparisons

Enrollment at Los Angeles Pierce College in various student categories during the last two academic years is presented on p. 52. The District-wide trends toward increased enrollment of evening students, females, first-time students and students aged 21 and over are clearly evident at Pierce. Despite the foregoing, however, Pierce's Fall 1973 percentages of day students (67.4%) and of students under 21 (47.1%) were the highest of any college in the District. In addition, Pierce shows clear trends toward increases in part-time students and students of sophomore standing.

Ethnic Enrollment Data

Pierce's ethnic enrollment data are presented on p. 53. The extremely high percentage of students from whom ethnic data were collected lends unusual validity to the Pierce findings. Pierce had the highest percentage of "Other White" students (93.4% in Fall 1973) of any college in the District. Conversely, Pierce's Fall 1973 percentages of American Indian students (0.5%) and Black/Negro students (1.1%) were the lowest of any District college.

Ten Year Enrollment Comparisons

Enrollment for the last 10 academic years at Pierce is shown on pp. 54 and 55. Pierce illustrates the District-wide pattern of greater increase in day relative to evening enrollment since 1964 (127.9% relative to 31.5% in Fall comparisons).

Weekly Student Contact Hours (WSCH)

WSCH and WSCH per student for the last five academic years are found on pp. 56 and 57. Pierce supports the overall District trends of increased day class loads relative to 1969-70. However, in contrast to the overall District pattern, no clear evidence exists that evening students are taking heavier class loads than they did five years ago.

Average Daily Attendance (ADA)

Pierce's day - evening ADA data are presented on p. 58 and the OTA - DA data on p. 59. District-wide trends are generally supported--e.g., greater increase of day relative to evening ADA in Fall but not in Spring comparisons, greater increase of OTA relative to DA ADA in both Fall and Spring. ADA generated by day students comprised 79.5% of Pierce's total ADA in Fall 1973; ADA generated by OTA students comprised 86.9% of total ADA in the same semester.

LOS ANGELES SOUTHWEST COLLEGE

Two-Year Enrollment Comparisons

Southwest's enrollment in various student categories during the last two academic years is shown on p. 62. Southwest exhibits the District-wide trends toward increased enrollment of females and of students aged 21 and over. In fact, Southwest's percentage of female students (58.4% in Fall 1973) was the highest in the District. In addition, Southwest showed a clear increase in full-time relative to part-time enrollment. Despite the last trend, however, Southwest had the highest percentage of part-time students in the District in Fall 1973 (68.9%).

Ethnic Enrollment Data

Ethnic enrollment data for the 1972-73 and 1973-74 academic years are presented on p. 63. Black/Negro students comprise a larger percentage of Southwest's total enrollment (91.4% in Fall 1973) than of any other college in the District. Southwest's percentage of American Indian enrollment (1.0%) was also the highest in the District. Not surprisingly, enrollment of other ethnic groups at Southwest was correspondingly low.

Seven-Year Enrollment Comparisons

Southwest's day and evening enrollment since its establishment in 1967 can be found on pp. 64 and 65. Because of initial low evening enrollment, Southwest has experienced a greater percentage increase in this category than in day enrollment since 1967. Evening enrollment, in fact, represented 47.2% of Southwest's total enrollment in Fall 1973.

Weekly Student Contact Hours (WSCH)

WSCH data for the 1972-73 and 1973-74 academic years are presented on pp. 66 and 67. Southwest provides clear evidence of the overall District trends toward decreased day class loads and increased evening class loads. Day class loads have decreased from an average of 14.43 WSCH in Fall 1969 to 12.47 WSCH in Fall 1973; average evening WSCH has increased from 7.37 to 8.79 in the same period.

Average Daily Attendance (ADA)

Day - evening ADA data are found on p. 68 and OTA - DA data on p. 69. Not surprisingly, extremely sharp increases have occurred in all ADA categories since Southwest's establishment in Fall 1967. ADA generated by day students represented 69.1% of Southwest's total ADA in Fall 1973; ADA generated by OTA students represented 79.1% of total ADA in the same semester.

LOS ANGELES TRADE-TECH COLLEGE

Two-Year Enrollment Comparisons

Enrollment in various student categories for the last two academic years may be found on p. 72. The fact that Trade's student body is atypical of the District as a whole is quickly apparent. No clear support exists for any of the overall District trends except that for increased enrollment of students aged 21 and over. Trade exhibits the highest percentages of any college in the District in enrollment of evening students (61.6% in Fall 1973), males (72.5%), full-time students (42.1%), freshmen (81.2%), first-time students (41.2%), and students aged 21 and over (80.9%).

Ethnic Enrollment Data

Trade's ethnic enrollment data are presented on p. 73. Black/Negro students represent the largest percentage of the student body (40.0% in Fall 1973), followed by "Other White" students (33.6%) and Spanish-Surnamed students (16.7%). Trade has a higher percentage of students in the "Other Non-White" category (3.7%) than any other college in the District.

Ten-Year Enrollment Comparisons

Enrollment trends for the last 10 academic years are presented on pp. 74 and 75. Most immediately apparent is the large percentage of total enrollment in the "evening" category; evening students accounted for 61.6% of Trade's total enrollment in Fall 1973. However, evening enrollment declined 7.0% from Fall 1964 to Fall 1973, while day enrollment increased 58.9% in the same period. Day students have thus comprised an increasingly large percentage of Trade's

total enrollment during the last 10 years.

Weekly Student Contact Hours (WSCH)

WSCH and WSCH per student data for the last five academic years are presented on pp. 76 and 77. Although day enrollment has increased more sharply than evening enrollment during this period, the class load patterns for day and evening students are similar to those found in the rest of the District. In Fall 1969 the average Trade day load was 26.71 WSCH; five years later the average load had dropped to 22.74. Evening class load underwent a contrasting increase during the same period, from an average of 6.14 WSCH in Fall 1969 to 7.76 WSCH in Fall 1973.

Average Daily Attendance (ADA)

Day - evening ADA data are presented on p. 78 and OTA - DA data on p. 79. Trends are compatible with those of the District as a whole--e.g., greater increase of day relative to evening ADA in Fall but not in Spring comparisons, greater increase of OTA relative to DA ADA in both Fall and Spring. ADA generated by DA students actually decreased 13.1% from Fall 1964 to Fall 1973. ADA generated by day students represented 70.5% of Trade's total ADA in Fall 1973, while ADA generated by OTA students represented 86.7% in the same semester.

LOS ANGELES VALLEY COLLEGE

Two-Year Enrollment Comparisons

Valley's enrollment in various student categories for the 1972-73 and 1973-74 academic years can be found on p. 82. Valley illustrates the District-wide trends toward increased enrollment of females, first-time students, and students aged 21 and over. These groups represented, respectively, 48.1%, 29.5%, and 62.0% of total Valley enrollment. Interestingly, however, Valley's percentage of first-time students (29.5% in Fall 1973) is the lowest of any college in the District. Valley shows the District trend toward increased evening relative to day enrollment only in the Spring. It should be noted that the large percentage increases in sophomore enrollment probably reflect data processing irregularities between the 1972-73 and 1973-74 academic years.

Ethnic Enrollment Data

Ethnic enrollment data at Valley are presented on p. 83. "Other White" students comprise the largest ethnic group (85.6% in Fall 1973), followed by Spanish-Surnamed students (7.8%) and Black/Negro students (3.3%). Other minority groups have uniformly low percentages of total enrollment.

Ten-Year Enrollment Comparisons

Day and evening enrollment for the last 10 academic years can be found on pp. 84 and 85. Trends are compatible with those of the District as a whole--e.g., preponderance of day over evening enrollment in terms of numbers and also in terms of greater rate of percentage increase since 1964. Day enrollment accounted for 62.0% of Valley's total enrollment in Fall 1973; 10

years ago the percentage was 49.4%.

Weekly Student Contact Hours (WSCH)

Valley's WSCH and WSCH per student data are presented on pp. 86 and 87. In line with the general District trend, day students have taken progressively fewer class hours per week since 1964 while evening students have shown the opposite trend. The average Valley day load was 11.88 WSCH in Fall 1973, down from an average of 13.67 in Fall 1967. The average Valley evening loads were 7.91 and 6.55 WSCH for the same two semesters.

Average-Daily Attendance (ADA)

Day - evening ADA comparisons may be found on p. 88 and OTA - DA comparisons on p. 89. ADA trends are compatible with those of the District as a whole--e.g., greater increase of day relative to evening ADA in Fall but not in Spring comparisons, greater increase of OTA relative to DA in both Fall and Spring. Day ADA represented 77.0% of total Valley ADA in Fall 1973, and OTA ADA represented 82.2% of the total.

WEST LOS ANGELES COLLEGE

Two-Year Enrollment Comparisons

West's enrollment in various student categories during the last two academic years may be found on p. 92. West supports the District-wide trends for increased numbers of females, evening students, and students aged 21 and over. These groups comprised, respectively, 49.9%, 38.8%, and 59.3% of West's total enrollment in Fall 1973. West has the lowest percentage of continuing students of any college in the District (51.7% in Fall 1973); however, contrary to most other colleges, continuing students are increasing more rapidly than are first-time students.

Ethnic Enrollment Data

Ethnic enrollment data are presented on p. 93. By far the largest ethnic groups are "Other White" students (49.4% in Fall 1973) and Black/Negro students (40.0%). The latter group, however, appears to be increasing more rapidly than any other ethnic group.

Six-Year Enrollment Comparisons

Enrollment trends since West's establishment in Spring 1969 may be found on pp. 94 and 95. As may be expected of a new institution, substantial percentage increases occurred in both day and evening enrollment. As was the case at Southwest College, evening enrollment at West has undergone sharper increases than has day enrollment since the institution's inception.

Weekly Student Contact Hours (WSCH)

WSCH and WSCH per student data are found on pp. 96 and 97. Support exists for the District-wide trend toward decreased day class loads and increased evening loads during the past five years; the day averages for Fall 1973 and Fall 1969 are, respectively, 11.99 and 14.23 WSCH, while the evening averages are 8.23 and 6.14 for the same semesters.

Average Daily Attendance (ADA)

Day - evening ADA comparisons are presented on p. 98 and OTA - DA ADA comparisons on p. 99. Although ADA generated by day students comprised 77.5% of West's total ADA in Fall 1973, the rate of increase of day ADA has been less than that of evening ADA. A similar situation exists in the OTA - DA relationship. Although ADA generated by OTA students comprised 83.9% of West's total ADA in Fall 1973, it is DA ADA that has undergone the sharper increase since 1968.

INSTRUCTIONAL TELEVISION

Enrollment in instructional television (ITV) since its inception in Spring 1971 may be found on p. 101. The erratic pattern evident in ITV enrollment since 1971 results from programming variations between the various years (e.g., courses offered, times of presentation, etc.) The declines evident since Spring 1972 are due mainly due to the airing of previously-presented courses.

Complete student-category data except for age and sex are not collected on ITV students. For this reason ITV students are arbitrarily assigned to the following categories when computing District totals: day, part-time, freshmen, continuing.

WSCH and WSCH per student data for ITV are found on pp. 102 and 103. ADA data are presented on pp. 104 and 105.
